"Digi-Find It" is Innovative Document Imaging, LLC's front-end presentation module. After digitizing files and creating PDF files, the standard way to present the files is through a file folder structure. Searching the PDF files in this fashion can be difficult and time consuming. A user must know exactly where to locate the information among a large volume of files.

"Digi-Find It" is a web-based interface for internal network or world wide web that allows users to search across volumes of PDF text searchable digital files in seconds. Currently this product has seen its success in many libraries and makes searching PDF digitized archives fast and easy. Digi-Find It has an attractive customized front end and is very affordable.
